

Edition: 023.20-12

## Product catalogue

### OSB – Knifering newest generation

---

- Higher fatigue strength on the front ring (without chip pocket, reduced notch effect).
- Simpler structure of the knife clamping system (fewer components / longer service life).
- Avoidance of erosion wear during the machining process.
- Longer service life of the front ring.
- Higher wear resistance of the wear shoes (service life > 1 year).
- No regrinding and regrinding of wear shoes in the knife basket necessary.
- Easy replacement of individual wear shoes.
- Proven zero setting further optimized.
- Significantly less cleaning effort compared to centrifugal wedge clamping.
- Electric automatic screwdriver unit with improved evaluation of the setting data (option).
- Vibration-dampening effect through modified knife carriers and front ring during the machining process (mass increase).
